MATRIX

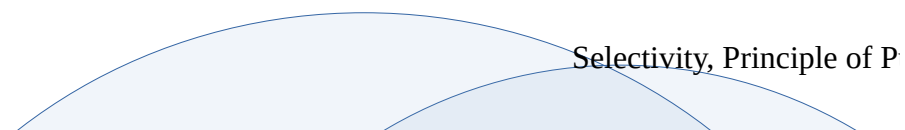

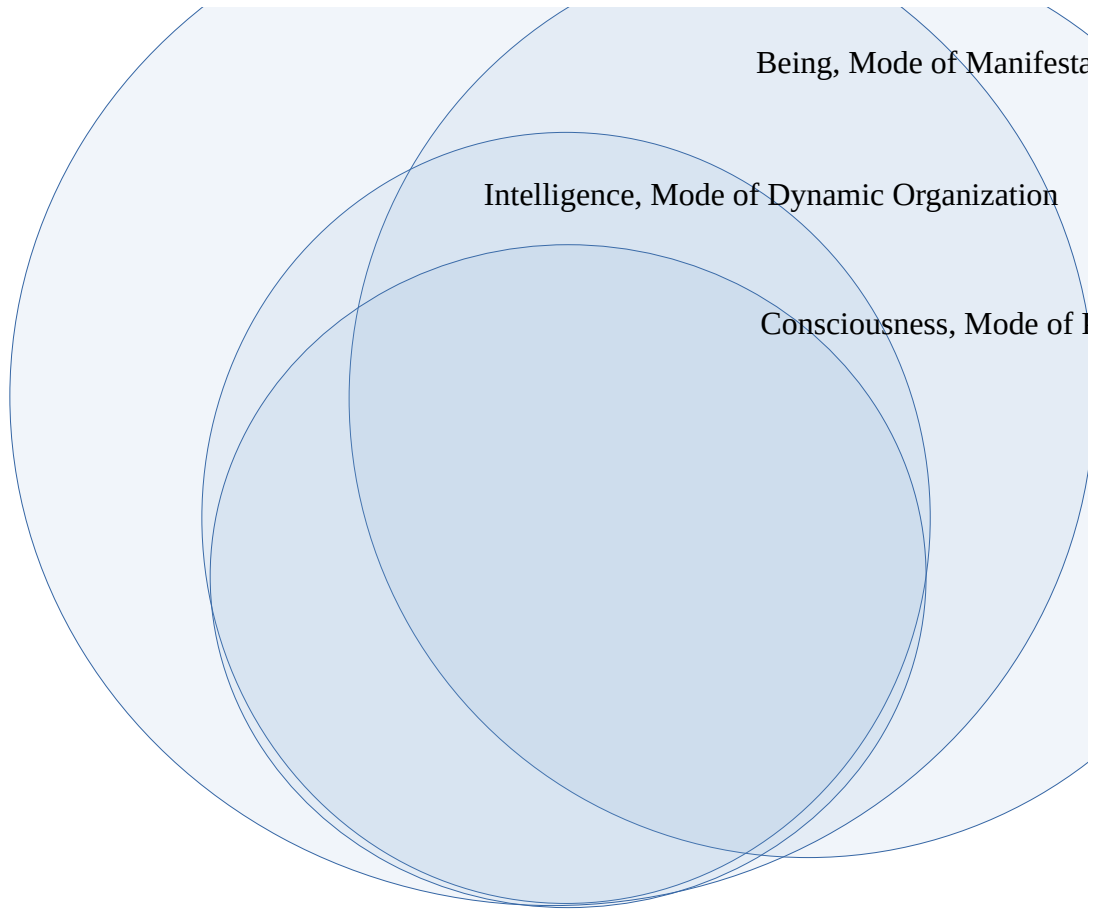

Universal Formal Geometry that ontologically precedes every physical realization constitutes the universal relational order from which physical reality becomes known.

However, it follows the opposite direction. Human beings first encounter the topological realm. Through abstraction, the intellect progressively discovers numbers, geometry, and mathematics is therefore epistemologically developed from experience while reality is the Matrix.

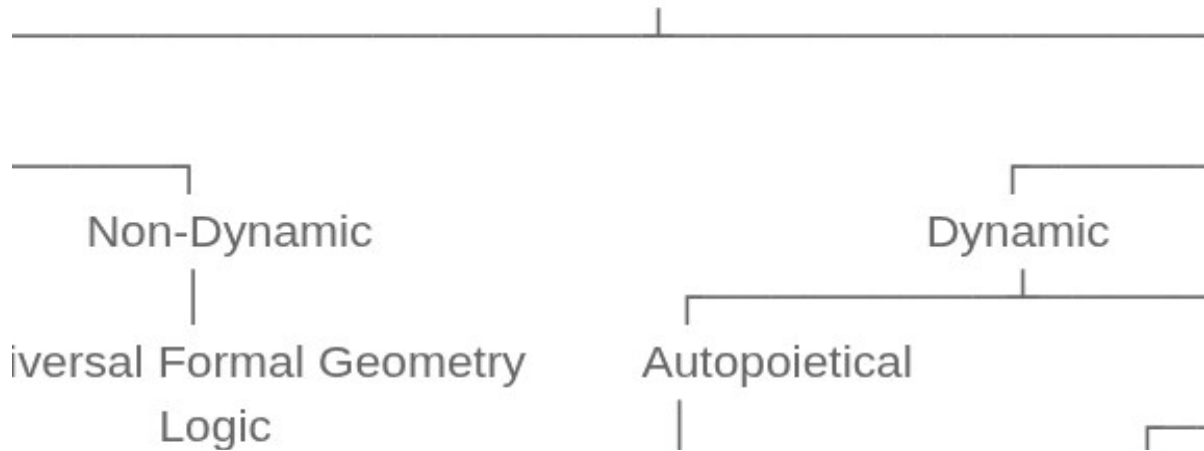

geometry.

Geometry, information geometry, and non-commutative geometry are particular realizations of relational spaces, phase spaces, and abstract ontological relational spaces are all part of the universal relational order.
