

SESSION_FOOTPRINT_TACE_v1.0_2026-07-15

Theory of Actualized Conscious Experience (TACE)

Status: Canonical Session Recovery Document

Version: 1.0

Date: 2026-07-15

Purpose

This document is the canonical bootstrap for recovering the TACE project in a new ChatGPT session. Its purpose is to reconstruct the conceptual, ontological, architectural, and methodological state of the project independently of previous conversation history.

Unless explicitly superseded by later canonical documents, this document represents the current state of TACE.

1. Nature of TACE

TACE (Theory of Actualized Conscious Experience) is a comprehensive metaphysical and formal ontological framework intended to explain reality through a unified account of:

- God as Necessary Being.
- The Matrix as the created ontological principle of formal possibility.
- Mathematical structure.
- Physical realization.
- Conscious participation.
- Historical actualization.
- Semantic intelligibility.

The framework is fundamentally Aristotelian-Thomistic while incorporating modern mathematics, physics, systems theory, and formal ontology without reducing one domain to another.

2. Foundational Ontological Hierarchy

The current high-level hierarchy is:

Necessary Being (God)

↓

Matrix

↓

Tetrahedral Structure (candidate)

↓

Mathematical Structure of Creation

Universal Formal Geometry

Logic

Canonical Sense

↓

Selectivity

↓

Q-Forms

↓

Topology

↓

Physical Actualization

↓

Substances

↓

Silver Bridge

↓

Acts of Consciousness

↓

Historical Participation

3. Necessary Being

Necessary Being is the uncreated source of all existence.

God is not contained within the Matrix.

The Matrix is a created ontological principle.

4. Matrix

Current canonical understanding:

The Matrix is the created ontological principle possessing the lawful power through which admissible formal possibilities become historically actualized according to the Mathematical Structure of Creation.

The Matrix is neither:

- physical,
- conscious,
- material,
- nor merely informational.

It possesses operative ontological efficacy.

5. Mathematical Structure of Creation

Current definition:

The Mathematical Structure of Creation is the complete relational architecture of all admissible mathematical possibilities.

It is constituted by:

- Universal Formal Geometry
- Logic
- Canonical Sense

This structure exists independently of physical realization.

6. Universal Formal Geometry

Universal Formal Geometry is the purely formal organization underlying every admissible possibility.

It precedes:

- metric space,
 - topology,
 - spacetime,
 - physical fields.
-

7. Logic

Logic governs formal consistency.

It is objective.

Logic belongs to the Mathematical Structure rather than to conscious beings.

8. Canonical Sense

Canonical Sense is the intrinsic semantic organization of formal structures.

It is neither subjective meaning nor human language.

It grounds objective intelligibility.

9. Tetrahedral Structure (Current Candidate)

The Tetrahedral Structure is the proposed fundamental organization of the Matrix.

It is not merely a geometric figure.

Rather, it expresses the minimal complete organizational geometry through which lawful differentiation becomes possible.

Its canonical status remains under evaluation.

10. Selectivity

Major revision.

Selectivity is no longer understood as an active operator.

Current definition:

Selectivity is the static formal principle defining lawful bifurcations through which the Matrix performs deterministic selection.

11. Selection

Selection is deterministic.

It belongs to the Matrix.

12. Choice

Choice is contingent selection.

Choice characterizes conscious agents.

13. Free Will

Free Will is intentional choice.

It presupposes:

- consciousness,
 - intentionality,
 - rational participation.
-

14. Q-Forms

Q-Forms constitute the principle of potentiality corresponding to Aristotelian matter.

They are:

- non-material,
- non-spatial,
- ontological possibilities,
- constrained by Selectivity,
- historically actualized by the Matrix.

Topology first appears through the organization of Q-Forms.

15. Form

Forms are actualities.

A Form occupies a position within semantic geometry rather than within spatial topology.

Identity is determined through semantic position rather than spatial location.

16. Substance

Substance is the hylomorphic unity of:

- Form
- Q-Form

Further refinement of the taxonomy of dynamic and non-dynamic entities remains ongoing.

17. Silver Bridge

Canonical definition:

The Silver Bridge is the Universal Onto-Epistemological Isomorphic Principle of Creation through which the Realm of Forms and the Physical Realm remain intrinsically and inextricably interlocked while preserving lawful isomorphic correspondence.

It does not transport souls.

It does not transmit consciousness.

It preserves ontological correspondence.

18. Consciousness

Consciousness is historical participation in reality through intentional acts.

Consciousness does not create reality.

Neither is it reducible to physical processes.

19. Reality and World

Current distinction:

Reality is singular.

Reality exists independently of observers.

World is the historically organized field of participation through which conscious beings experience reality.

Different beings may inhabit different worlds while participating in the same reality.

20. Language

Language does not construct reality.

Language constructs worlds.

Human symbolic language organizes cultural participation.

Different languages may construct different worlds while referring to the same underlying reality.

21. Culture

Culture is a higher-order organization of communicative world construction.

It depends upon symbolic communication.

22. Communication

Communication is an ontological mechanism for world construction.

Distinct species may possess distinct communicative organizations producing distinct worlds without implying distinct realities.

This development incorporates insights inspired by Maturana and Varela while remaining integrated into the TACE ontology.

23. Ontological Priority

Current order:

Reality

↓

World

↓

Culture

24. Rationality

Logic is objective.

Rationality belongs to conscious beings.

The two concepts must never be conflated.

25. Physical Realm

Physics operates after:

- Mathematical Structure,
- Selectivity,
- Q-Forms,
- topology.

Physical laws describe historical realization rather than ultimate ontological origin.

26. Methodological Principles

The ontology is authoritative.

External scientific theories provide evidence but do not determine ontology.

Concepts are admitted into the ontology only after canonical evaluation.

Refinements must preserve internal coherence.

27. Current Major Ontology Candidates

The following remain under active evaluation:

- Tetrahedral Structure of the Matrix.
 - Revised ontology of dynamic and non-dynamic entities.
 - Hylomorphic entity taxonomy.
 - Power-Pull as a primitive ontological operator.
 - Formal derivation of Selectivity from tetrahedral organization.
-

28. Canonical Recent Discoveries

The most significant conceptual advances since the previous footprint are:

1. Separation of Matrix and Selectivity.
2. Formal decomposition of the Mathematical Structure into Universal Formal Geometry, Logic, and Canonical Sense.
3. Canonical distinction between Selection, Choice, and Free Will.
4. Reality-World distinction.

5. Language as world-construction rather than reality-construction.
 6. Recognition of communicative organization as the basis of world formation.
 7. Clarification that Forms occupy semantic positions rather than spatial locations.
 8. Clarification that topology succeeds pure geometry.
 9. Development of the tetrahedral organization hypothesis for the Matrix.
 10. Strengthening of the Silver Bridge as an isomorphic principle rather than a transport mechanism.
-

29. Software Principles

The TACE software ecosystem is ontology-driven.

The ontology is the primary authority for semantic reasoning.

AI components assist reasoning but do not redefine ontology.

The long-term architecture remains:

Natural Language

↓

Semantic Reduction

↓

Canonical Representation

↓

Ontology Mapping

↓

Reasoning

↓

Canonical Response

30. Mission

The objective of TACE is to provide a coherent formal ontology unifying metaphysics, mathematics, physics, consciousness, semantics, and historical existence while preserving the distinction between Necessary Being, created formal order, physical realization, and conscious participation.

This document serves as the canonical recovery point for future sessions and should be updated whenever major ontological advances become stable.
